### **DETAILED ACTION**

Claims 1-30 have been canceled. Claims 31-60 have been added. Upon review of the newly submitted claims the restriction requirement of Paper No. 14, mailed March 27, 2002 has been withdrawn.

#### ***Election/Restrictions***

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- a. cancerous diseases,
- b. autoimmune diseases, and
- c. infectious diseases.

Applicant is required, in reply to this action, to elect a single species, a, b or c, to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 1642

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Claims 31-41 and 54: species of groups a and c.

Claims 42-49 and 55-60: species of groups a, b and c.

The following claim(s) are generic: 31-47 and 50-60.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: .

The diseases of tumors, solid tumors, leukemia and lymphomas and autoimmune diseases are linked with the common technical feature of being disorders arising from the failure of the immune system to recognize endogenous tissues expressing self-antigens which become autonomous within the confines of the organism.

The diseases of autoimmunity are linked with the common technical feature of the failure of the immune system to recognize normal self antigens as toleragens.

The diseases of bacterial, viral or mycotic infection are linked with the common technical feature of the failure of the immune system to recognize non-self antigens within endogenous tissues.
